

**Ondal Academy**

Training program 2024

# Ondal Academy

---

Welcome to our exclusive product training courses, where theory meets practice and takes your skills to a new level!

We are pleased to present our new training program for 2024 on the following pages.

## Why our training courses?

In addition to the usual requirements and manufacturer standards, we offer you the following highlights, among others:

### Hands-on experience

Learn directly on the system, experience the challenges of real installation conditions and master them with brilliance.

You will have the opportunity to improve your skills live on the complete Ondal portfolio and master simulated situations in the field with confidence.

### Sound and proven theory

Benefit from the many years of experience of our product experts and the exchange of knowledge from the market through internal change management and quality management.

## Training content

### Basic training courses

Our comprehensive basic training course will provide the perfect preparation for service technicians to perform their tasks. The training combines theoretical knowledge with practical exercises on the system and includes the following content:

- Basic knowledge of the system  
Introduction to the functionality and components of the system
- Basics of ceiling mounting  
Fastening methods and installation requirements
- Assembling Ceiling mounting  
Step-by-step instructions and practical exercises for secure fastening
- Mounting the system  
Integration of the components and complete installation of the system
- Installation of end devices  
Installation and configuration of various end devices
- Maintenance of the system  
Regular maintenance, problem solving and preventive measures

## Training content

### Train-the-Trainer

The train-the-trainer course covers all the content of the basic course and goes beyond it. After passing the exam, participants are qualified to train their colleagues themselves for a period of two years. In addition to the basic content, the following topics are covered:

Additionally in the "Train the Trainer Course"

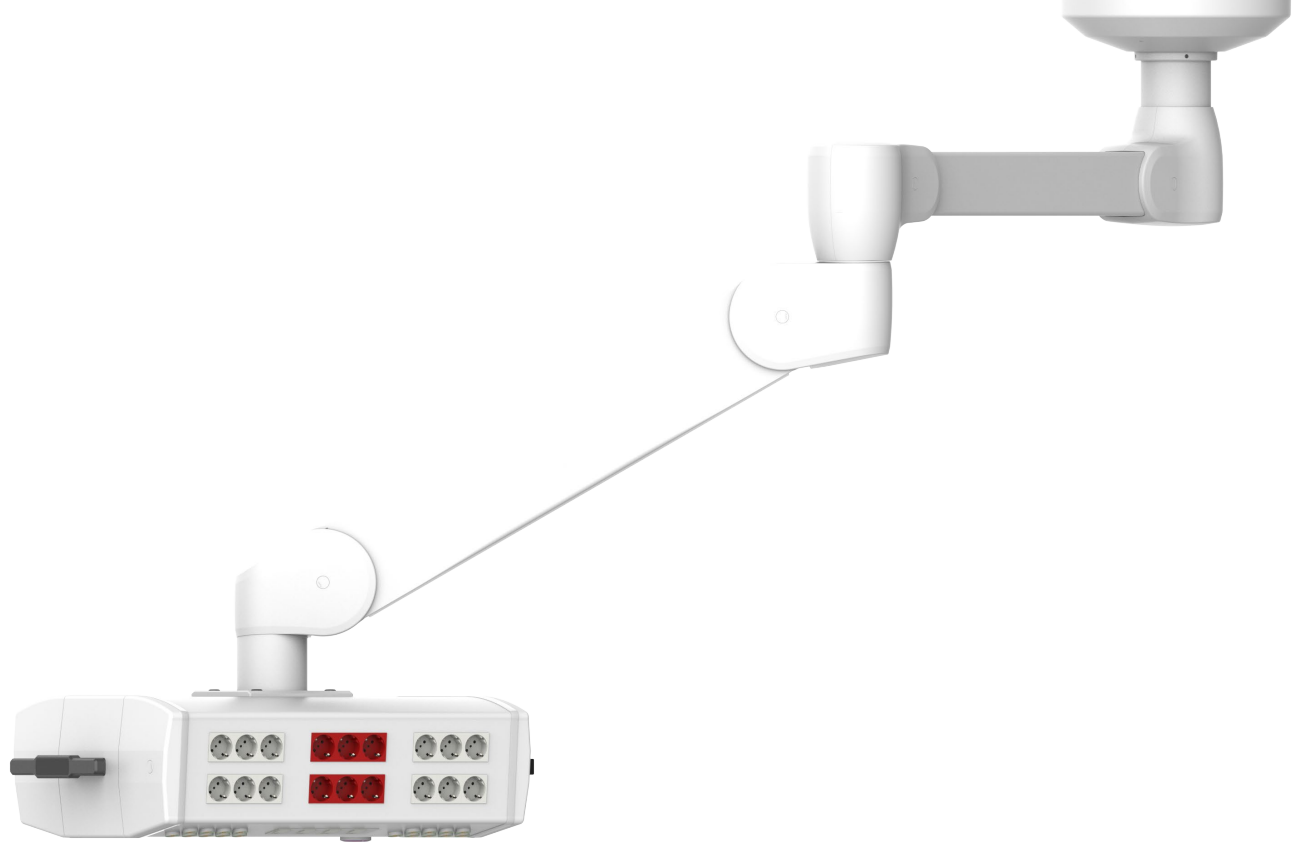

- Detailed knowledge of the product portfolio  
Overview of the complete product range and possible system combinations
- Project planning  
Requirements for statics and room conditions for various installation scenarios.
- Troubleshooting and repairs  
Methods for the efficient diagnosis and rectification of system problems.
- Field experiences  
Exchange and analysis of real application examples and best practices.
- Spare parts management  
Spare parts management is designed to be customer-friendly and includes a visual presentation that enables the optimum identification of the required components.

## Special conditions

Unleash your potential, embrace new knowledge!

We offer you attractive special conditions for our training courses :

- 10% discount for 5 participants per customer.
- 15% discount from 10 participants per customer.
- 30% discount from 15 participants per customer.

### Individual training dates

In case of booking two different trainings in a row, an additional discount of 20 % on the training is granted. Please note that individual training requests are excluded from the discount.

### Onsite training courses

It is possible to carry out on-site training at any time. In this case, it is the responsibility of the customer or the service provider to ensure that the necessary infrastructure is provided. This includes appropriate training rooms, the systems to be trained and the required equipment (tools, lifting devices, test equipment, etc.). In addition, the following travel expenses are incurred:

- DACH-region: 950,00 €
- Benelux: 1.150,00 €
- Rest of the EU: 1.950,00 €
- Outside the EU: Price on request

### Inquiries and contact

Training inquiries can be sent to us at any time via our website. We look forward to providing you with a customized offer.
